ENA WELCOMES FIRST ASSOCIATE

Companies and organisations with an interest in the UK transmission and distribution market are now able to directly benefit from the work of the Energy Networks Association. From policy analysis and commentary through a range of technical and engineering services, the unrivalled expertise of ENA is available through Associate status.

The first company to take advantage of these services is the Channel Island electricity company Guernsey Electricity.

Marking this bold new approach to serving the wider electricity sector ENA Chief Executive Nick Goodall, said "This initiative is designed to give access to many of the services available to Association Members. We have a long list of potential associates who have expressed an interest and will be tailoring our services to meet their needs."

Steve Morris from Guernsey Electricity commenting on their new ENA Associate status said "We look forward to a useful working partnership."

As well as welcoming Associates from outside the UK such as Guernsey Electricity, Associate status would be useful to companies wishing to enter the emerging markets in gas distribution and renewable energy.
